

## AQUA-care ★★ ★

### Fitting Diagram

### Fitting Instructions

1. Switch off and drain your water supply.
2. Install AQUA-care in a closed room sheltered from excessive light and heat. The unit must be installed on the cold water main with a non-return valve installed down line of the dosing unit to prevent back flow.
3. It is advisable to install a bypass for maintenance and emergencies.
4. Install unit using 2 off copper isolating valves (not supplied). Having completed the assembly test for leaks. NB. IF pressure exceeds 7 bar a pressure reducer will be required.
5. After appliance installation let the water flow for approximately 5 minutes prior to use.

AQUA-care in situ

### Refill Instructions

1. Switch off the water supply to your AQUA-care. Separate the two halves of your AQUA-care unit by unscrewing the bottom half anti-clockwise.
2. Lift out and disregard the old cartridge, putting the new cartridge in its place and ensuring all rubber seals are where they should be and intact.
3. Screw the two halves of the unit back together and switch the water supply back on, testing for leaks.
4. The AQUA-care cartridge should be replaced every six months.
