

# Aquamaster Diamond Refill Filters

## What are the different types of filters available?

Aquamaster Diamond has a choice of five different filters that are available.

## Why are there different types of filter available?

The wide filter choice gives the consumer a choice of prices and filtration level so that filtration suits the needs, geography and pocket of everyone wanting to filter water.

## How can they save money?

Bottled water is an alternative to filtered water. With the most economic Diamond filter cartridges filtering 5000L of water per 6 months, this gives an approximate cost of 0.4p per litre over one year. Even the cheapest bottled water can't compete with that. The environment also benefits with less plastic bottles being made and disposed of.

## How long does each filter last?

Each filter keeps filtering water for 3000 to 5000 litres depending on the cartridge type chosen. UK water byelaws say that cartridges should be changed every 6 months to maintain the health of the water passing through. This is the industry recognised average lifespan. Salamander has a free reminder service to prompt you to change the filter.

## Can I fit them myself?

Yes, all filters on this page are refills for the Aquamaster Diamond filter. They are all very simple to change with no expertise needed. For refilling instructions, please view the 'Easy to fit' PDF. Refills can be bought on the website.

## About the C10 refill filter

Media used: Silver impregnated granular activated carbon, inside a 1 micron ceramic cartridge casing.  
Properties: All waterborne cysts and 95% of all bacteria down to 0.7  $\mu$ M stopped on the ceramic surface. Silver is a bactericide, killing bacteria in flowing water and disinfecting still water inside the device. Activated carbon removes taste and odour contamination, including chlorine. Silver replaces chlorine as a disinfectant.

## About the BGSC refill filter

Media used: Silver impregnated granular activated carbon, inside a 1 $\mu$ M ceramic cartridge casing including 'Scalex' limescale control.  
Properties: As C10, with added WRc approved 'Scalex' food grade polyphosphate, which interacts with calcium and magnesium salts to interfere with crystal growth, reducing scale. Also provides corrosion protection.

## About the GSC refill filter

Media used: Granular activated carbon, inside a 5 $\mu$ M ABS plastic casing including 'Scalex' limescale control.  
Properties: As BGSC, with added 'Scalex' to inhibit limescale and provide corrosion protection.

## About the GC refill filter

Media used: Granular activated carbon, inside a 5 $\mu$ M ABS plastic casing.  
Properties: Activated silver impregnated carbon kills bacteria, also eliminates 75-85% THM's, 95% of Herbicides and Insecticides, 90-95% of Solvents, PAH's, Turbidity, taste and odour contamination, including chlorine. Silver replaces chlorine as a disinfectant.

## Other useful products

The Aquamaster Diamond Filter kit is available on the website, as are a range of spare parts.
