

Aquamaster Mini

Who needs an Aquamaster Mini?

Aquamaster Mini is a basic water filter that improves the taste and odour of tap water and absorbs a variety of unwanted chemicals, including hydrocarbons and agricultural chemicals. It provides filtration down to 10 microns.

About our water filters

The Aquamaster Mini delivers a level of filtration suitable for most domestic households, offering peace of mind that any unwanted chemicals are removed and water will taste fresh and pure.

The Aquamaster Mini works by passing a flow of fresh water through a bed of filter material together with the use of some other ingredients within the filter media. It has the ability to absorb a variety of unwanted chemicals, including hydro-carbons and agricultural chemicals etc. The filter goes to work immediately it is installed and will work in an efficient manner for its planned life, giving trouble-free operation.

How can it save money?

Bottled water is one alternative to filtered water. With Aquamaster Mini filter cartridges filtering 2500 litres of water per 6 months, this gives an approximate cost of 0.8pence per litre over one year. Even the most economic bottled water can't compete with that. The environment also benefits with less plastic bottles being made and disposed of.

What results can I expect?

Tea will be better tasting without 'scummy' traces on the surface. Taste of water will improve and odour will diminish. You can be more confident in the health of the water, with hydrocarbons and agricultural chemicals filtered out.

How long does each filter last?

Each filter will keep filtering your drinking water for 2500 litres. UK water byelaws say that cartridges should be changed every 6 months to maintain the health of the water passing through. This is the industry recognised average lifespan. Salamander operate a free reminder service to prompt you to change the filter.

Can I fit it myself?

Yes, Aquamaster Mini is simple to fit, it can be DIY fitted without the need to hire a plumber. For full fitting instructions, please view the 'Easy to fit' PDF. Aquamaster Mini comes with all the necessary parts but you will need to be able to drill a hole in the work surface where the filter tap will be fitted.

How simple is it to refill?

Aquamaster Mini is very simple to refill with no expertise needed. For refilling instructions, please view the 'Easy to fit' PDF. Refills can be bought on the website.

Other useful products

For more advanced filtration needs consider using the Aquamaster Pearl. The Aquamaster Pearl provides filtration down to 5 microns and comes with a full size chrome tap.

For the most advanced filtration available from Salamander, consider using the Aquamaster Diamond. The Aquamaster Diamond has a range of different filters available to fit it, offering the user a wide choice of water filtering options to suit individual circumstances. It provides filtration down to either 5 or 1 microns, depending on the filter used.

A range of spare parts for all Aquamaster filters are available to buy on the website.
