

Taps for Aquamaster Water Filters

Why would I need a tap?

All Aquamaster Filters come with a tap, so there is no need to buy a tap separately, everything you need to use the filter comes complete in the box.

However, the Aquamaster Mini comes with a smaller sized tap with a lever to turn it on and off, you may prefer to buy a full sized tap with an ordinary turning handle.

If you have chosen to buy the Aquamaster Pearl or Aquamaster Diamond, they both come with a full sized chrome tap. A white tap is also available. You may wish to purchase a white tap if that is a better match to your kitchen decor.

About the taps

Aquamaster Taps are available in choice of chrome or white. Both have a turning on/off mechanism. They are narrower than a standard kitchen tap with a long elegant neck, making fitting a glass under them easy.

What comes with the tap?

The tap comes with everything you need to connect it to the filter. Whichever filter you bought, it will come complete with a self-drilling tap to connect it to the incoming cold water supply, plus a set of push-fit pipe connectors and some flexible tubing, to pass the water through the filter and to the tap on the work surface. Aquamaster Taps come with all the necessary parts to connect to the filter kit, but you will need to be able to drill a hole in the work surface where the filter tap will be fitted.

Can I fit it myself?

Yes, Aquamaster Taps are simple to fit, they can be DIY fitted without the need to hire a plumber. For full fitting instructions, please view the 'Easy to fit' PDF for whichever filter you will be using the tap with, either Aquamaster Pearl or Aquamaster Diamond. Should you be fitting the tap to the Aquamaster Mini, then either the Aquamaster Pearl or Aquamaster Diamond 'Easy to fit' PDF's will be a suitable guide.

Other useful products

Aquamaster taps are designed to fit the range of Aquamaster Filters. For basic filtration needs consider using the Aquamaster Mini. The Aquamaster Mini provides filtration down to 10 microns

For more advanced filtration needs consider using the Aquamaster Pearl. The Aquamaster Pearl provides filtration down to 5 microns.

For the most advanced filtration available from Salamander, consider using the Aquamaster Diamond. The Aquamaster Diamond has a range of different filters available to fit it, offering the user a wide choice of water filtering options to suit individual circumstances. It provides filtration down to either 5 or 1 microns, depending on the filter used.

A range of spare parts for all Aquamaster filters are available to buy on the website.
