

Aquamaster Diamond Refill Filters

Why do I need a choice of different types of refill filter?

Aquamaster Diamond has a choice of five different filters that are available. The wide filter choice gives the consumer a choice of prices and filtration level so that filtration suits the needs, geography and pocket of everyone wanting to filter water. Every filter in the range contains silver impregnated granular activated carbon, which removes taste and odour contamination, including chlorine. Silver replaces chlorine as a disinfectant. After that, the choice of filter is based upon issues such as whether you have a problem with hard water / limescale and the level of filtration you prefer.

Features of C10 filter

- Provides water filtration to 1 micron
- Silver impregnated granular activated carbon
- Activated carbon removes taste and odour contamination
- Silver acts as a bactericide and disinfectant, killing bacteria.

Features of BGSC filter

- Provides water filtration to 1 micron
- Silver impregnated granular activated carbon
- Activated carbon removes taste and odour contamination
- Silver acts as a bactericide and disinfectant, killing bacteria
- Added 'Scalex' food grade polyphosphate, which interacts with calcium and magnesium salts to interfere with crystal growth, reducing scale
- 'Scalex' also provides corrosion protection.

Features of GSC filter

- Provides water filtration to 5 microns
- Silver impregnated granular activated carbon
- Activated carbon removes taste and odour contamination
- Silver acts as a bactericide and disinfectant, killing bacteria
- Added 'Scalex' food grade polyphosphate, which interacts with calcium and magnesium salts to interfere with crystal growth, reducing scale
- 'Scalex' also provides corrosion protection.

Features of GC filter

- Provides water filtration to 5 microns
- Silver impregnated granular activated carbon
- Activated carbon removes taste and odour contamination
- Silver acts as a bactericide and disinfectant, killing bacteria.
