

SCALE-gon

Why do I need appliance protection against limescale?

Salamander's SCALE-gon is designed for households suffering from limescale deposits in single appliances such as washing machine and dishwashers. In these appliances, limescale deposits can build up on heating elements, causing lack of efficiency. This is because limescale is a very effective insulator and the element therefore has to be on, using power, for a longer period to heat up the water to the required temperature. Other problems with limescale in these appliances are blocked and scaled up pipework and parts, limescale clogged sprayers and dull dirty looking inner surfaces.

Features

- Gives protection for individual appliances against limescale build up
- Easy to fit (takes a few minutes) and maintain with secure fittings to attach the SCALE-gon between the pipework and machine
- Easy unscrew green cap for easy access to the refilling chamber
- Robust clear plastic unit so you can see when the crystals need renewing

Benefits

- No plumber is required to fit the unit
- Washing machines and dishwashers have MUCH longer lives with SCALE-gon
- Gives protection for individual appliances against limescale build up
- Eliminates the need for de-scaling appliances using tablets or manually
- Easy to fit (takes a few minutes) and maintain - no plumbing required
- Unit is easily recharged by filling the unit from time to time (depending on amount of use) with replacement crystals available on our website
- Water is completely safe, odourless and colourless when it has been treated
- Very economic and effective
